

CLAIMS

Claim 1 (previously presented): A corner panel cover attachment system comprising:

a corner panel cover with at least two of a latch and catch supported on the panel cover, each catch with a deformable slot walls and each latch with an enlarged head; and a means for attaching one or more elongated member to the corner panel cover.

Claim 2 (currently amended): The corner panel cover of claim 1 wherein the means for attaching the is at least one fastener.

Claim 3 (currently amended): The corner panel cover of claim 1 wherein the means for attaching is at least one elongated member cavity ~~1315~~.

Claim 4 (new): A panel cover comprising at least two of a latch and a catch supported on the panel cover, each catch with a deformable slot walls and each latch with an enlarged head; and at least one elongated member attached to the panel cover by a fastener.

Claim 5 (new): The panel cover of claim 4, wherein the fastener is least one fastener in conjunction with a mounting plate and a mounting guide.

Claim 6 (new): The panel cover of claim 4, wherein the fastener is a cavity of a mounting guide, whereby the cavity of the mounting guide is sized to secure the elongated member within the cavity.

Claim 7 (new): The elongated member of claim 4, wherein the elongated member is selected from the group consisting of a rod, stick, flat stick, or dowel.

Claim 8 (new): A structural element comprising:

four panel covers each affixed to a non-panel element forming a four-sided frame.

Claim 9 (new): The non panel element of claim 8 wherein the non-panel element is selected from the group of a stick, flat stick, rod, dowel, or elongated member.

Claim 10 (new): The non panel element of claim 8 wherein the non-panel element is made of wood, plastic, or metal.

Claim 11 (new): A snap together arrangement comprising:

at least two structural elements each comprising four panel covers each affixed to an elongated member forming a four-sided frame whereby a first edge of a first structural

element is connected by at least one panel cover to a panel cover on a first edge of a second structural element to form a substantially right angle between the first structural element and the second structural element, whereby the first structural element and second structural element form a 2-sided arrangement.

Claim 12 (new): The snap together arrangement of Claim 11 further comprising of a third structural element, whereby a first edge of the third structural element is connected by a panel cover to a second edge of the second structural element to form a substantially right angle between the second structural element and the third structural element, whereby the first structural element, the second structural element, and the third structural element form a 3-sided arrangement.

Claim 13 (new): The snap together arrangement of Claim 11 further comprising of a fourth structural element, whereby a first edge of the fourth structural element is connected by a panel cover to a second edge of the third structural element to form a substantially right angle between the third structural element and the fourth structural element, and; whereby a second edge of the fourth structural element is connected by a panel cover to a second edge of the first structural element, whereby the first structural element, the second structural element, the third structural element, and the fourth structural element form a 4-sided arrangement.
